Our Work

At LAYER, our work reflects our belief that good design is not just about aesthetics — it's about clarity, usability, and purpose. Every project we take on is carefully planned and thoughtfully designed to meet real user needs while maintaining a clean and modern visual style.

We focus on creating responsive, accessible, and performance-oriented websites that deliver a seamless experience across all devices. From layout structure and typography to spacing and interaction flow, every detail is crafted to ensure consistency and ease of use.

Our design process starts with understanding the brand, audience, and goals. This allows us to translate ideas into digital solutions that communicate clearly, build trust, and leave a lasting impression. We avoid unnecessary complexity and prioritize simplicity, readability, and long-term usability.

Whether it's a business website, a personal portfolio, or a frontend practice project, our work demonstrates a strong foundation in HTML, CSS, and responsive design principles. Each project is built with scalability in mind, making it easy to extend, update, and adapt as requirements grow.

Selected Projects

Clinic Website
Healthcare website with clean and professional layout.

LAYER Studio
Minimal portfolio website showcasing studio identity.

Amazon Clone
Frontend practice project focusing on layout accuracy.

Our Services

Design-driven digital solutions for modern brands. We help businesses and individuals build strong online identities through clean design, responsive layouts, and user-focused experiences.

Our services are crafted to support brands at every stage — from concept and design to development and launch. We focus on simplicity, clarity, and performance to ensure long-term value.

Website Design
Modern, clean, and brand-focused website designs that visually communicate your message and build trust with your audience.

Frontend Development
Responsive HTML & CSS development with a strong focus on layout accuracy, performance, and cross-device compatibility.

UI / UX Design
User-centered interface design focused on usability, accessibility, and smooth interaction flow.

Responsive Design
Mobile-first and fully responsive layouts that adapt seamlessly across desktops, tablets, and smartphones.

Landing Page Design
High-converting landing pages designed to highlight key offerings, guide users, and support marketing goals.

Website Redesign
Refresh and improve existing websites with modern layouts, better structure, and enhanced user experience while keeping brand consistency intact.

Digital Design Studio crafting modern, clean, and responsive websites for brands and individuals.

Windows File Explorer Edge Google Chrome VS Code

ENG IN 14:26 20-01-2026

The screenshot shows a browser window with multiple tabs open, including several instances of "Sahiba" and "Error". The active tab displays a mobile website for "LAVER Design Studio" at the URL 127.0.0.1:5500/layer%20website/services.html. The site has a dark blue header with navigation links: Home, Work, Services, About, Contact. Below the header is a hero section with text: "website designs that visually communicate your message and build trust with your audience." Two main service sections are shown in rounded boxes: "Frontend Development" (Responsive HTML & CSS development) and "UI / UX Design" (User-centered interface design focused on usability, accessibility, and smooth interaction flow).

The browser's developer tools are open, showing the DOM tree on the right. The body has a class of "service-page". The DOM structure includes a header, a hero section, two service sections, and a footer. A script block is present with a comment indicating it was injected by live-server.

The developer tools also show the Styles tab with the following CSS rules:

```
html, body.service-page {  
    max-width: 100%;  
    overflow-x: hidden;  
}  
.service-page {  
    background: radial-gradient(circle at top right, #1e4cff, #0a1226);  
    color: #d6d9df;  
    font-family: 'Poppins', sans-serif;  
}  
body {  
    background: #0a1226;  
    color: #ffffff;  
    padding-top: 90px;  
}
```

At the bottom of the developer tools, there are tabs for Console and Issues, along with various system status icons and a date/time stamp (20-01-2026) on the far right.
